

Monday 2nd November

Maths Home Learning

Collect 10 items from around your house. These could be socks, lego pieces, dried pasta or anything else you can think of!

Then split the items into two parts (called partitioning) before moving them back together to create one whole.

Use the following words to describe what you are doing.

First there were _____ objects.

Next I added _____ more objects.

Then there were _____ objects altogether.

Try and find 5 different ways of partitioning the objects you are using to make 10.
